

# In Ice, Mirrorr

1993

22' 50"

Rolf Enström

In Ice, Mirror was commissioned by the Swedish Broadcasting Corporation and was premiered at "Cosmonova" at the Stockholm Electronic Music festival 1993. The composition is grouped around a transformation of two voices which are melted in a surrounding of ice, earth and wood. The sound recordings have been processed in various ways with DSP-techniques, sampling-sequencing and processed again after mixing. My wife and my eldest son had, at the time the recordings of their voices took place, very similar timbre in certain registers of their voices. This was very practical when I made transformations between their voices.

The piece deals with spacial dimensions and the best listening result is obtained in the middle of two loudspeakers or listening with headphones.

1:st voice: Love Enström  
2:nd voice: Karin Enström Salomonsson  
3:rd voice: Hans Jonstojj
